

APPARATUS AND METHOD FOR APPLYING A SEQUENCE OF THERAPEUTIC LIGHTS TO SPECIFIC POINTS ON A PATIENT'S BODY

Abstract

A light therapy system that exposes specific light frequencies to specific points on a patient's body. The light varies both in frequency and in length of exposure. A broad range of light frequencies are intermittently directed to chakra points on a patient's body. Selected light frequencies are sequenced for each chakra point. An adjustable apparatus is provided which can simultaneously expose multiple locations, with the ability to align each lamp to a specific location and at a specific distance from the patient's body.
